

REMARKS

This is a response to the final rejection. Basically, the examiner has objected to the language of claim 13, upon the grounds that the language was ambiguous, under section 112.

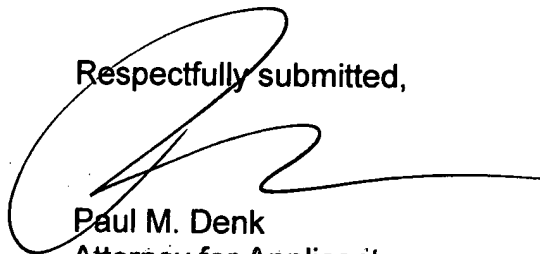

Claim 13 has been rewritten as claim 14, and as such, it is believed to accurately describe the style of lens assembly as shown in FIGS 21 - 25 of the drawings. And, these drawings show and the application describes in detail are precisely defined, and the components of the lens blank, comprising the button section, its integral concentric stem, the magnetic ring, and the cap, all as fully defined on pages 18 - 20 of the application specification. At least the components, as now set forth in newly added claim 14, define the components as explained in the application specification, and add further clarity to the same components that were previously set forth in the claim 13, which the examiner found ambiguous. Certainly the components has defined in the specification, and as shown in FIGS. 21 - 25 of the drawings, provide a lens assembly that clearly and reasonably convey to on skilled in the relevant art exactly how to make the assembly as defined in this claim.

Furthermore, on the merits, it is believed that Avery still does not show the claimed subject matter of Applicant's invention, that Applicant's device, structural wise, is different from Avery, it is assembled from different components, that a magnetic ring is used for a different purpose, Avery does not define, nor have any reason, for applying threads to the outer surface of any button, much less a cap portion of a lens assembly, all of which are for adjustment purposes, as described and claimed by Applicant.

Hence, it is submitted that patentable subject matter should now be set forth in this redrafted claim, which has been amended for the purpose of adding clarity to the definition of this particular invention.

The examiner's further review of this would be appreciated.

Respectfully submitted,

A handwritten signature in black ink, consisting of a large, stylized 'P' followed by a horizontal line that extends to the right.
